# ADDITION

## Stage 1

- Children will be introduced to the vocabulary of addition and the + symbol
- Lots of practical work, informal jottings, whole-part models and counting on fingers will be used to help children understand that addition is the combination of 2 or more sets of objects.

Counting sets of objects.

Eg Practical counting activities in meaningful contexts. Vocabulary to include count on, altogether, one more.

Combining 2 sets of objects into 1 group.

Eg Combining numbers and objects. Whole-part models.

5 stars

Finding number bonds

Practical Counting

$$5+1=6$$

Drawing pictures/ dots. Informal jottings.

Eg  $3 + 5 = 8$

## Stage 2

- The children will use a range of filled number lines to help them add small numbers together.
- They will learn to partition numbers into tens and units and then recombine them.

Counting on using a number line

$$8 + 7 = 15$$

Counting on using a number line and putting the biggest number first. Also counting on by putting the biggest number in your head.

$$\text{Eg } 3 + 5 = 8$$

Counting on using a number line including bridging through 10

$$\text{Eg } 7 + 8 = 15$$

Partition and recombine

Eg Partition...  $53 = 50 + 3$  or recombine ...  $50 + 3 = 53$

Partitioning into tens and ones.

### Stage 3

- Children will consolidate partitioning.
- They will add a multiple of 10 to a number.
- A range of practical apparatus (eg. place value cards, Dienes apparatus, place value counters) will be used to complete TU + TU. They partition the number into tens and ones before adding the numbers together, finding the total.

Adding a multiple of 10 to a number.	E.g. $23+10 = 20 + 10 = 30 + 3 = 33$ Or $23+20 = 43$	
Partitioning smaller numbers into tens and units	Eg $53 + 32 = 85$  $50+3+30+2 = 85$ (Also done through jottings) → Eg $50 + 30 = 80$ $3 + 2 = 5$ $80 + 5 = 85$	Or $12+13 = 12 + 10 + 3$ $= 22 + 3$ $= 25$
Adding the multiples of 10 first, then the units	e.g. $34+23=$  $34 \quad 44 \quad 54 \quad 55$  $45 + 9 =$  $45 \quad 54 \quad 55$	

add 9 by adjusting

Dienes' Apparatus

### Stage 4

- Children will use partitioning to add two, 2-digit numbers together that cross the tens boundary.
- Practical methods will lead to more formal written methods.
- Then larger numbers will be used (3 digit + 3 digit and 4 digit + 4 digit)

Using practical apparatus and/or a number line to help,

Partitioning, but using a more formal written method.

$$\begin{array}{r} 25 + 47 \\ 20 + 40 = 60 \\ 5 + 7 = 12 \\ 60 + 12 = 72 \end{array}$$

Numbers are written beside each other but adding the tens first, then the units.

Partitioning with numbers written underneath each other

$$\begin{array}{r} 52 = 50 + 2 \\ +62 = 60 + 2 \\ \hline 110 + 4 = 114 \end{array} \quad \text{or} \quad \begin{array}{r} 25 = 20 + 5 \\ +47 = 40 + 7 \\ \hline 60 + 12 = \end{array}$$

Then adding larger numbers by partitioning.

two 3-digit numbers  
Eg  $145 + 236$

two 4-digit numbers  
eg  $2364 + 1423$

$145 = 100 + 40 + 5$	or	$2364 = 2000 + 300 + 60 + 4$
$+ 236 = 200 + 30 + 6$		$1423 = 1000 + 400 + 20 + 3$
$300 + 70 + 11 = 381$		$3000 + 700 + 80 + 7 = 3787$

### Stage 5

- Supported by practical equipment, children will begin to use the formal long written method.
- Once confident, practical equipment will be taken away.
- Children will then work with larger numbers and decimal numbers.

As children first experience the practical version of column addition they record the written method alongside.

Place Value

Eg.  $11 + 53 = 64$

Units digits are added first.

$$\begin{array}{r} 11 \\ + 53 \\ \hline 64 \end{array}$$

Partitioning, using vertical columns, adding the units column first.

$62$	$52$
$+36$	$+ 62$
$8$	$4$
$90$	$110$
$98$	$114$

Working with larger numbers and decimals, adding the units digit first

$123$	$435$	$20.3$
$+345$	$+356$	$+ 82.4$
$8$	$11$	$0.7$
$60$	$80$	$2.0$
$400$	$700$	$100.0$
$468$	$791$	$102.7$

### Stage 6

- Supported by practical equipment, children will begin to use the formal short written method, initially with and then without carrying digits.
- Once confident, practical equipment will be taken away.
- Children will extend the method to work with progressively larger whole numbers and decimal numbers. They will learn that decimal points should line up under each other.

As children first experience short addition methods, practical apparatus is used to support them and they record the written method alongside.

Diagram illustrating the transition from practical apparatus to a written short method for  $25 + 47 = 72$ . It shows base ten blocks (tens and ones) and a written method with a carry.

Units digits are added first.

$$\begin{array}{r} 25 \\ + 47 \\ \hline 72 \end{array}$$

Short written method initially

$67$	$57$	$278$
------	------	-------

without and then with carrying digits. Units digits are added first.	$\begin{array}{r} + 32 \\ 99 \\ \hline \end{array}$	$\begin{array}{r} + 28 \\ 85 \\ \hline 1 \end{array}$	$\begin{array}{r} + 165 \\ 443 \\ \hline 11 \end{array}$	
Using progressively larger digits and decimals	Eg £3.59 + 78p	£3.59	$\begin{array}{r} + £0.78 \\ \hline £4.37 \\ 11 \end{array}$	

## SUBTRACTION

### Stage 1

- Children will be introduced to the vocabulary of subtraction and the – symbol.
- Lots of practical work, informal jottings (eg rubbing out / crossing out) and counting back on fingers will be used to help children understand subtraction as the process of taking away.
- Children will also be taught to find the difference between two numbers.

Practical counting activities	Vocabulary to include : How many are left?  $5 - 1 = 4$
-------------------------------	---

Finding the difference	 Which line has most money? How much more?
------------------------	--

Jottings. Getting a set of objects and taking some away.	$8 - 5 = 3$ 
--	-----------------

### Stage 2

**Children will use a filled number line to help them count backwards and forwards in small steps.**

Practical activities	Counting back from a larger number Counting back using a complete filled number line and number squares  eg. $10 - 4 = 6$ 
----------------------	--

### Stage 3

- Children will count backwards in larger steps
- They will find the difference by counting on.

Using a number-line to count back in larger steps.	Counting Back $65 - 23 = 42$  Plus jottings $60 - 20 = 40$ $5 - 3 = 2$ $40 + 2 = 42$
Finding the difference by counting on.	 $74 - 27 =$  The 'jumps' should be added, either mentally or with jottings according to confidence, beginning with the largest number e.g. $40 + 4 + 3$ .

### Stage 4

- Alongside the number line method, children will use practical apparatus to take away the smaller number from the larger number and model exchanging.

Practical apparatus and drawings are used to model exchanging

Eg  $72 - 47 = 25$

Take away the 4 tens first  
Then exchange a ten for 10 ones

Now take away the 7 ones

2 tens and 5 ones are left = 25

### Stage 5

- Supported by practical equipment (place value counters and Dienes' apparatus), children will begin to use the formal short written column method, initially without and then with exchanging.
- Once confident, practical equipment will be taken away.

As children first experience short subtraction written methods, practical apparatus is used to support them and they record the written column method alongside.

Eg  $72 - 47$

OR

leading to

OR

leading to

Exchanging takes place by swapping a ten for 10 ones.

OR

OR

OR

OR

### Stage 6

- Finally children use the compact column subtraction method as the most efficient form.
- The children will learn how to use the method for subtraction of TU - TU numbers and HTU - HTU numbers
- They will subtract the most significant digit first (units column).
- Once children are confident with HTU - HTU, this should be extended to THTU - THTU.

Short written column method initially without and then with exchanging.

Eg.  $76 - 24 = 52$  (without exchanging)

$$\begin{array}{r} 76 \\ - 24 \\ \hline 52 \end{array}$$

Eg.  $563 - 246 = 317$  (with exchanging)

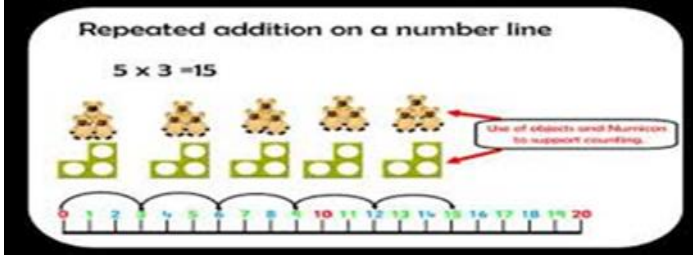

Units digits are subtracted first.

	$\begin{array}{r} 51 \\ \cancel{56}3 \\ \underline{246} \\ 317 \end{array}$
Extend the method to numbers with any number of digits and decimal places.	$\begin{array}{r} 4151 \\ \cancel{56}7.8 \\ \underline{-478.5} \\ 89.3 \end{array}$ <p>Line decimal points up underneath each other.</p>
<h1 style="margin: 0;">✕ MULTIPLICATION ✕</h1>	
<h2 style="margin: 0;">Stage 1</h2> <ul style="list-style-type: none"> <li>• Lots of practical work and counting of sets of objects will take place.</li> <li>• Pictorial representations will be used to show groups of objects.</li> <li>• Children will learn that multiplication is a way of grouping.</li> <li>• They will be taught how to multiply by using repeated addition.</li> <li>• Children will begin to be introduced to the vocabulary of multiplication.</li> </ul>	
Pictorial representations	
Real life contexts	<p>How many fingers on 2 hands?          How many sides on 3 triangles?          How many legs on four ducks?</p>
Counting in repeated groups	 <p style="text-align: right;">How many socks are there?</p>

Making the link with repeated addition.	 <p>How many wheels are there altogether? <math>2 + 2 + 2 = 6</math></p>  <p>How many fingers can you see?</p> <p>How much money do I have?</p> 
Grouping / lots of / sets of	<p>3 lots of 2      <math>2 + 2 + 2</math></p> 
<h2 style="margin: 0;">Stage 2.</h2> <ul style="list-style-type: none"> <li>• Children continue to use repeated addition to carry out multiplication tasks and represent their counting on a bead string or a number line.</li> <li>• Lots of practical work and counting will be used to help children understand that multiplication is a way of grouping and it is the combination of sets of objects or numbers.</li> <li>• Children will be introduced to the symbol X alongside repeated addition.</li> </ul>	
Bead strings	<p style="text-align: center;"><math>5 + 5 + 5 = 15</math></p>  <p>Children count out three lots of 5, then they count the beads altogether.</p>
Number lines	 <p style="text-align: right;"><math>10p + 10p + 10p + 10p + 10p = 50p</math>  <math>10p \times 5 = 50p</math>          5 hops of 10</p> <p>Children count on in groups of 10.</p>
Linking repeated addition and multiplication	<p style="text-align: center;"><math>3 \times 6</math>          or <math>6+6+6</math>          or 3 lots of 6</p>

The link can also be made using a number-line.

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19

Repeated addition on a number line

$5 \times 3 = 15$

Introducing the x symbol

$5 + 5 + 5 + 5 + 5 + 5 = 30$

$5 \times 6 = 30$

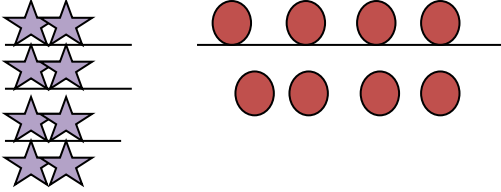

### Stage 3

- It is important to be able to visualise multiplication as a rectangular array. This helps children develop their understanding of the commutative law (ie numbers can be multiplied in any order and you will still get the same answer)
- Children will use pictorial representations (eg arrays) and may use rings to show groups.

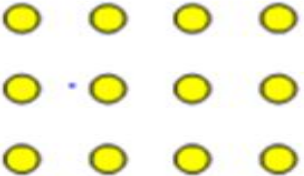

Arrays show that multiplication is commutative

$4 \times 2$  or  $2 \times 4$

3 lots of 4

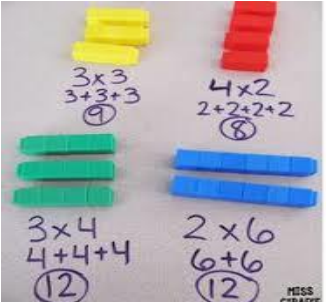

$3 \times 4$

4 lots of 3

$4 \times 3$

$2 \times 3 = 6$  and  $3 \times 2 = 6$

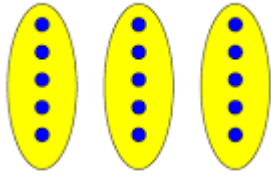

### Stage 4

- Children will look at the relationship between division and multiplication.
- They will be introduced to the idea of multiplication as the inverse of division.
- Multiplication cards will be sent home weekly with children from Year 2 onwards

Multiplication is the inverse of division

Eg  $15 \div 5 = 3$  and  $3 \times 5 = 15$

'How many groups of 5?'  
'15 shared equally between 3 people is...?'

'15 divided by 3 equals 5'  
'15 divided by 5 equals 3'

$15 \div 5 = 3$   
 $15 \div 3 = 5$

## Stage 5

- The link between arrays and the multiplication is made clear to children by the use of place value apparatus such as place value counters and Dienes.
- Multiplication will take place through partitioning.
- This is the children's first exposure to the distributive law of multiplication and children should be given plenty of opportunity to explore this .

Using practical apparatus to show the distributive law of multiplication

Multiply by tens and ones and add

$3 \times 4 = 12$   
 $3 \times 10 = 30$   
 $12 + 30 = 42$

The distributive law definition

The distributive law means that a number is **partitioned** and then each part of that number is multiplied, before the answers are added back together to form a final total.

Eg  
In the sum  $13 \times 4$  the number 13 is partitioned into Tens and Units. So 13 becomes 10 and 3.

Each part of this number is then multiplied by 4.

$$\begin{array}{r}
 4 \times 13 \\
 4 \times 10 = 40 \\
 4 \times 3 = + 12 \\
 \hline
 \text{Total} \quad 52
 \end{array}$$

Multiplication through partitioning.

Without carrying digits over for the total.

$$\begin{array}{r}
 4 \times 14 \\
 4 \times 10 = 40 \\
 4 \times 4 = + 16 \\
 \hline
 56
 \end{array}$$

The tens column is multiplied first

Without, then with carrying digits over when adding the total.

With carrying digits over for the total.

$$\begin{array}{r}
 16 \times 7 \\
 6 \times 7 = 42 \\
 10 \times 7 = + 70 \\
 = 112 \\
 \hline
 1
 \end{array}$$

## Stage 6

- Children will be introduced to the expanded short multiplication column method, which still uses partitioning.
- 

Steps in the expanded short multiplication method

The first step is to represent this method of recording in a column format, but still showing the working down the side.

Children should be expected to multiply the units first which enables them to move more easily towards the compact method later on.

Children will describe what they do by referring to the actual values of the digits in the columns. For example, the second step in the sum below ( $35 \times 4$ ) is 'thirty multiplied by four', not 'three times four', although the relationship  $3 \times 4$  should be stressed. (eg If

	we know that $3 \times 4 = 12$ then we also know that $30 \times 4 = 120$ )		
			
Expanded short multiplication method TH x U	$\begin{array}{r} 35 \\ \times 4 \\ \hline 20 \text{ (4x5)} \\ + 120 \text{ (4x30)} \\ \hline 140 \end{array}$	$\begin{array}{r} 78 \\ \times 9 \\ \hline 72 \text{ (9x8)} \\ + 630 \text{ (9x70)} \\ \hline 702 \\ \text{1} \end{array}$	$\begin{array}{r} 345 \\ \times 7 \\ \hline 35 \text{ (7x5)} \\ 280 \text{ (7x40)} \\ 2100 \text{ (7x300)} \\ \hline 2415 \\ \text{1} \end{array}$
Use with increasingly larger numbers. HTU x U THTU x U			

**Stage 7**

- Children will then move onto using the compact short written method for multiplication.
- The recording is reduced further, with the carried digits recorded below the line.

Short Written method TU x U	$\begin{array}{r} 35 \\ \times 4 \\ \hline 140 \\ \text{2} \end{array}$	$\begin{array}{r} 78 \\ \times 9 \\ \hline 702 \\ \text{7} \end{array}$	$\begin{array}{r} 345 \\ \times 7 \\ \hline 2,415 \\ \text{33} \end{array}$
Then use increasingly larger numbers HTU x U THTU x U And with different contexts such as money	$\begin{array}{r} \text{£}3.55 \times 9 = \text{£}3.55 \\ \text{ } \times 9 \\ \hline \text{£}31.95 \\ \text{44} \end{array}$		

**Stage 8**

- As children's confidence with the method grows, they will use larger whole numbers, decimals and in a range of contexts eg money.
- The long multiplication method will be used to multiply 2 digit numbers.
- The method will be used with a wide range of contexts (eg money)

Long multiplication for multiplying by 2 digit numbers TU x TU HTU x TU THTU x TU	Starting with the expanded method	Leading to a more compact method																																			
	$\begin{array}{r} 53 \\ \times 16 \\ \hline 18 \text{ (6x3)} \\ 300 \text{ (6x50)} \\ 30 \text{ (10x3)} \\ + 500 \text{ (10x50)} \\ \hline 848 \end{array}$	$\begin{array}{r} 53 \\ \times 16 \\ \hline 318 \text{ (x6)} \\ + 530 \text{ (x10)} \\ \hline 848 \end{array}$																																			
																																					
	Finally leading to this compact method with increasingly larger numbers:																																				
	<table border="1" style="width: 100%; text-align: center;"> <tr><td></td><td></td><td></td><td>5</td><td>3</td></tr> <tr><td></td><td></td><td>x</td><td>4</td><td>6</td></tr> <tr><td></td><td></td><td></td><td><del>1</del></td><td></td></tr> <tr><td></td><td></td><td>3</td><td>1</td><td>8</td></tr> <tr><td></td><td></td><td><del>1</del></td><td></td><td></td></tr> <tr><td>+</td><td>2</td><td>1</td><td>2</td><td>0</td></tr> <tr><td></td><td>2</td><td>4</td><td>3</td><td>8</td></tr> </table>					5	3			x	4	6				<del>1</del>				3	1	8			<del>1</del>			+	2	1	2	0		2	4	3	8
			5	3																																	
		x	4	6																																	
			<del>1</del>																																		
		3	1	8																																	
		<del>1</del>																																			
+	2	1	2	0																																	
	2	4	3	8																																	

12 strawberries shared between 4 people

### Stage 2

- Children make recordings of their work as they solve a problem where they share objects out equally.

Using jottings

Eg.

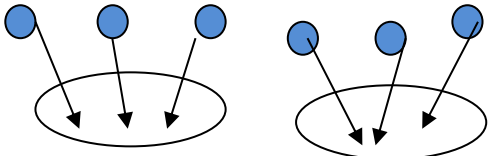

- 8 sweets are shared between 4 people how many will each person get?

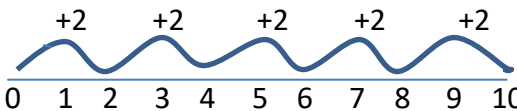

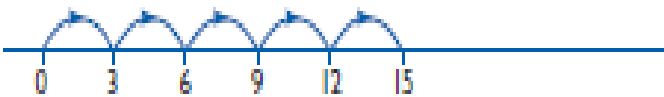

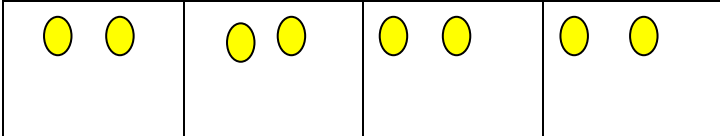

15 peas shared out equally between 5 plates

- Division is also (introduced in) contexts and also used alongside the recordings
- The division sign will be introduced and used alongside the recordings

<p>Division as grouping</p>	<p>Eg.</p>  <p>Divide 50 coins into groups of 10 .</p>  <p>There are 10 coins in each group. 50 divided into groups of 10, equals 5 So <math>50 \div 10 = 5</math> Or 5 groups with 10 in each group, equals 50 So, there are 5 groups of 10 in 50.</p> <p>Or</p> <p>6 tennis balls grouped into threes</p>  <p>There are 3 in each group so <math>6 \div 3 = 2</math></p>
<p>Division as repeated addition</p>	<p>How many 2s are there in 10?</p> 

	<p>so there are five 2s in 10 or <math>10 \div 2 = 5</math></p>
<p>Division as repeated addition on a labelled number line (without remainders)</p>	<p>This can also be shown on a number line</p> <p>How many 2s are there in 10? <math>10 \div 2 = 5</math></p> 
<p>Counting on labelled and then empty number lines (without remainders)</p>	<p><math>15 \div 3 = 5</math></p>  <p>Write the jump size labels on the empty number line as you make the jumps.</p>
<p>Division shown as arrays</p>	<p><math>8 \div 4 = 2</math></p> 
<p><b>Stage 4</b></p> <ul style="list-style-type: none"> <li>● Division is also taught as repeated addition on a labelled number line with remainders.</li> <li>● Children will relate division to its inverse, multiplication.</li> </ul>	

- Children will be exposed to different forms of division questions

Division with remainders through repeated addition and 'How many left over?'

Eg.  $17 \div 5 = 3 \text{ r } 2$

$14 \div 3 = 4 \text{ r } 2$

Inverse relationship with multiplication (both with and without remainders)

Eg. (including remainders)

What is  $17 \div 5$  ?

Use 17.

What is the closest you can get to 15 in 5x table = 15 ( 3 lots of 5).

And how many left over? = 2

So  $17 \div 5 = 3 \text{ r } 2$

Types of questioning used

When discussing division, ask:

'How many threes are in 15?'

as well as:

'What is 15 divided by 3?'

to help children relate division to its inverse multiplication

## Stage 5

- Division on an empty number line will be used with larger numbers

Using an empty number line but with increasingly larger numbers  
 $2d \div 1d$   
 $3d \div 1d$   
 $3d \div 2d$

Division will be taught as counting on an empty number line

E.g  $365 \div 15 =$

Write the jump size labels on the empty number line as you make the jumps

This number line method explained:

The first jump is 10 lots of 15 = 150

The second jump is 10 lots of 15 (=150) = 300

The third jump is 2 lots of 15 (= 30) = 330

The forth jump is 2 lots of 15 (= 30) = 360

The last jump is 5 left over = 365

So 24 lots of 15 r 5

Final answer is:  $365 \div 15 = 24 \text{ r } 5$

## Stage 6

- Once children have developed a sound understanding of division, they can move onto the 'formal written method'

of short division.

- The short division method is used both with and without remainders.
- Until the summer term of Year 6 (for calculations where numbers with up to 4 digits are divided by a single digit number and also 4 digits divided by a 2 digit number) children are expected to use short division methods.

<p>Short Division Written Method (without remainders)</p> <p>Increasingly larger numbers will be used</p> <p>TU ÷ U HTU ÷ U THTU ÷ U</p>	<p>Eg Simple Calculations without remainders:</p> <p><b>3 digit</b></p> <p><math>369 \div 3 =</math></p> $\begin{array}{r} 123 \\ 3 \overline{) 369} \end{array}$ <p>Final answer is: <math>369 \div 3 = 123</math></p>
<p>Short Division Written Method (with remainders)</p> <p>Increasingly larger numbers will be used</p> <p>HTU ÷ U THTU ÷ U</p>	<p>Eg More complex calculations with remainders</p> <p><math>192 \div 6 =</math></p> $\begin{array}{r} 32 \\ 6 \overline{) 192} \end{array}$ <p>Final answer is: <math>192 \div 6 = 32</math></p> <p>Eg <math>197 \div 7 =</math></p> $\begin{array}{r} 28 \text{ r } 1 \\ 7 \overline{) 197} \end{array}$ <p>Final answer is: <math>197 \div 7 = 28 \text{ r } 1</math></p> <p>Eg <math>3625 \div 8 =</math></p> $\begin{array}{r} 453 \text{ r } 1 \\ 8 \overline{) 3625} \end{array}$ <p>Final answer is: <math>3625 \div 8 = 453 \text{ r } 1</math></p>

<p>HTU ÷ TU THTU ÷ TU</p>	<p>Eg <math>7990 \div 34 =</math></p> $\begin{array}{r} 235 \\ 34 \overline{) 799170} \end{array}$ <p>Final answer is: <math>7990 \div 34 = 235</math></p> <p>Jottings are made down the side for jumps of 34 <math>\rightarrow</math> 34</p> <p>68 102 136 170</p>
<p>Use the method in different real-life contexts such as with money or measures</p>	<p>Eg. <math>\pounds 7.84 \div 7 =</math></p> $\begin{array}{r} \pounds 1.12 \\ 7 \overline{) \pounds 7.84} \end{array}$ <p>Final answer is: <math>\pounds 1.12</math></p> <p>Eg. <math>3.92\text{kg} \div 7 =</math></p> $\begin{array}{r} 0.56 \\ 7 \overline{) 3.92} \end{array}$ <p>Final answer is: <math>0.56\text{kg}</math></p>
<p><b>Stage 7</b></p> <ul style="list-style-type: none"> <li>• Children will practise writing remainders as fractions and then decimals</li> </ul>	

Short division written method and converting remainders to fractions

Eg  $256 \div 5 =$

$$\begin{array}{r}
 51 \text{ r}1 \\
 5 \overline{) 256} \\
 \underline{25} \phantom{6} \\
 6
 \end{array}$$

$\text{r}1 = \text{r} \frac{1}{5}$  ← There is 1 left over out of the 5 that you are dividing by

Final answer is :  $256 \div 5 = 51 \frac{1}{5}$

Short division written method and converting remainders to decimals

Eg  $256 \div 5 =$

$$\begin{array}{r}
 51.2 \\
 5 \overline{) 256.10} \\
 \underline{25} \phantom{6.10} \\
 6 \phantom{.10} \\
 \underline{60} \phantom{.10} \\
 10 \\
 \underline{10} \\
 0
 \end{array}$$

Final answer is:  $256 \div 5 = 51.2$

**Note:** The fraction  $\frac{1}{5}$  in the previous answer is the same as (or equivalent to) the decimal answer 0.2

Eg  $247 \div 8 =$

$$\begin{array}{r}
 30.875 \\
 8 \overline{) 247.7040} \\
 \underline{24} \phantom{7.7040} \\
 7 \phantom{.7040} \\
 \underline{70} \phantom{.40} \\
 0 \phantom{.40} \\
 \underline{00} \phantom{.40} \\
 40 \\
 \underline{40} \\
 0
 \end{array}$$

Final answer is:  $247 \div 8 = 30.875$

Eg  $8007 \div 34 =$

$$\begin{array}{r}
 235.5 \\
 34 \overline{) 80120170} \\
 \underline{68} \phantom{0170} \\
 12 \phantom{0170} \\
 \underline{120} \phantom{170} \\
 17 \phantom{0} \\
 \underline{170} \\
 0
 \end{array}$$

Jottings are made down the side for jumps of 34 →

Final answer is:  $8007 \div 34 = 235.5$

34  
68  
102  
136  
170

## Stage 8

- In the summer term of Year 6, children will be familiarised with the vertical long division written method for calculations of up to 4 digits divided by a 2 digit number.
- Children will be encouraged to use their knowledge of times tables and multiples to speed this method up and will make jottings down the side before they begin the calculation.
- Remainders will also be written as fractions and decimals.
- The long division written method will be practised in a range of real-life contexts, such as with money and measures.

Vertical Method (Chunking)

Eg  $364\text{m} \div 13 =$

$$\begin{array}{r}
 28 \\
 13 \overline{) 364} \\
 \underline{26} \phantom{4} \\
 104 \\
 \underline{104} \\
 0
 \end{array}$$

Down the side, of the page, pupils use jottings to count on in multiples of the divisor

eg.  $13 = \text{x}1 \text{ lot}$   
 $26 = \text{x}2 \text{ lots}$   
 $52 = \text{x}4 \text{ lots}$   
 $104 = \text{x}8 \text{ lots}$   
 $130 = \text{x}10 \text{ lots}$

Final answer is:  $364\text{m} \div 13 = 28\text{m}$

<p>Vertical Method (explained)</p> <p><b>The method broken down</b></p> <p><b>Step 1</b> Say <math>43 \div 15 = 2</math> lots of 15 which equals 30</p> <p><b>Step 2</b> Bring down the number 2 from the sum</p> <p><b>Step 3</b> Say <math>132 \div 15 = 8</math> lots of 15 which is 120</p> <p><b>Step 4</b> There is 12 left over. This is the remainder.</p> <p><b>Step 5</b> The remainder can also be written as a fraction or a decimal</p>	<p>Eg. <math>432 \div 15 =</math></p> $  \begin{array}{r}  28 \text{ r } 12 \\  15 \overline{) 432} \\  \underline{- 30} \phantom{0} \\  132 \\  \underline{- 120} \\  12  \end{array}  $ <p>Final answer is: 28 r 12</p>	<p>Down the side, pupils use jottings to count on in multiples of the divisor</p> <p>eg. <math>15 = \text{x1 lot}</math>  <math>30 = \text{x2 lots}</math>  <math>60 = \text{x4 lots}</math>  <math>120 = \text{x8 lots}</math>  <math>135 = \text{x9 lots}</math>  <math>150 = \text{x10 lots}</math></p> <p>or: <math>28 \frac{12}{15} = 28 \frac{4}{5}</math>  or: <math>28.8</math></p> <p>Eg. Answer as a decimal</p> $  \begin{array}{r}  28.8 \\  15 \overline{) 432.0} \\  \underline{- 30} \phantom{0} \\  132 \\  \underline{- 120} \\  120 \\  \underline{- 120} \\  0  \end{array}  $ <p>eg. <math>15 = \text{x1 lot}</math>  <math>30 = \text{x2 lots}</math>  <math>60 = \text{x4 lots}</math>  <math>120 = \text{x8 lots}</math>  <math>135 = \text{x9 lots}</math>  <math>150 = \text{x10 lots}</math></p>
